HYPERCLAW

Open-Source Multi-Agent AI Orchestration · MIT · v0.1.0-alpha

The infrastructure layer for enterprise AI agents — intelligent routing, causal memory, and built-in security in one platform.

Personal deployment: OpenClaw (consumer tier)

PROBLEM

Enterprise AI agents fail in production. Existing frameworks (LangChain, AutoGen, CrewAI) lack intelligent routing, persistent memory, and security — built for demos, not scale.

SOLUTION — PROMETHEUS

HyperClaw's intelligence layer: UCB1 bandit routing learns optimal agent assignment, pgvector causal graph provides persistent memory, HyperShield enforces security policy.

ARCHITECTURE

- **PROMETHEUS** — Intelligence & orchestration
- **HyperRouter** — UCB1 bandit agent routing
- **HyperMemory** — pgvector causal graph
- **HyperShield** — Policy & security engine
- **HyperSwarm** — Agent coordination
- **HyperState** — Distributed state

BUSINESS MODEL

- MIT open-source core (developer flywheel)
- Enterprise tiers: $499 → $9,999/mo
- Sovereign: custom on-prem deployments
- $500K ARR target by end of 2026
- $3M ARR target by end of 2027
- $50M ARR target by 2030

TEAM

- **Vaughn Davis** — Founder & CEO. 15+ years luxury hospitality. Former MD, Dream Hollywood. CEO of Hyper Nimbus & Hyper Talent (separate ventures — validates enterprise sales track record)
- **Andy Zhang** — CTO. ML infrastructure & distributed systems. Architect of PROMETHEUS

USE OF FUNDS ($2M)

- Engineering (60%) — $1.2M team & infra
- GTM (20%) — $400K dev community & sales
- Ops & Legal (12%) — $240K
- Reserve (8%) — $160K contingency
