EXECUTIVE SUMMARY

CONFIDENTIAL

Open-Source Multi-Agent AI Orchestration — at Scale.

HyperClaw is the infrastructure layer for enterprise AI agents. We deliver intelligent multi-agent routing, causal memory, and built-in security in a single MIT-licensed platform.

OpenClaw — our personal AI platform — serves as the consumer distribution of the HyperClaw technology stack, validating the architecture at individual scale before enterprise deployment. OpenClaw users are HyperClaw's most natural enterprise prospects: they already understand agent-based AI and are ready to scale.

THE PROBLEM

AI Agents Are Broken in Production

Enterprise teams deploying AI agents face fragmented tooling, unreliable routing, no memory persistence, and zero security guardrails. Existing frameworks like LangChain and AutoGen were built for demos — not production workloads.

The result: **$40B+ wasted annually** on AI agents that fail to deliver ROI, fail in production, or get abandoned within 90 days of deployment.

What's Missing Today

- ✓ ✗ Intelligent agent routing (round-robin is dumb)
- ✓ ✗ Persistent causal memory across sessions
- ✓ ✗ Enterprise-grade security policy engine
- ✓ ✗ Specialized domain agents (not generic LLM calls)
- ✓ ✗ Observable, auditable agent decisions

THE SOLUTION

PROMETHEUS + SOLOMON + GENESIS — HyperClaw's Intelligence System

HyperClaw ships 50+ specialist AI agents managed by **SOLOMON** (overmind — always on, always watching), powered by **PROMETHEUS** intelligence layer. The **GENESIS Protocol** self-expands the agent network. Civilization Knowledge Base ingests SOPs, org charts, and runbooks. Three Human Gates baked in. 30+ connectors via HyperClaw Gateway.

🧠 **PROMETHEUS** Intelligence layer. Recursive decision engine for all orchestration

👁️ **SOLOMON** Overmind agent. Always on, manages 50+ specialists, triggers GENESIS

⚡ **GENESIS Protocol** Self-expanding: creates new specialists when gaps detected

📚 **Civilization KB** SOPs, org charts, JDs, client profiles. OrgGraph context injection

🛡️ **HyperShield** Zero-trust + Three Human Gates: Ethical, Auth, Uncertainty <60%

🔀 **UCB1 HyperRouter** Self-improving model routing. Learns optimal task assignment

BUSINESS MODEL

Open-Core → Enterprise

MIT-licensed open source drives developer adoption at zero CAC. Enterprise commercial layer monetizes teams that need SLAs, compliance, advanced memory, and custom deployments.

- ✓ Open-source core — free forever, MIT license
- ✓ Starter — $499/mo (teams up to 10)
- ✓ Pro — $1,999/mo (teams up to 50)
- ✓ Enterprise — $9,999/mo (unlimited)
- ✓ Sovereign — Custom pricing, on-prem

ARR Trajectory

YEAR	ARR TARGET	GROWTH
2026	$500K	—
2027	$3M	+500%
2028	$12M	+300%
2029	$28M	+133%
2030	$50M	+79%

TEAM

Vaughn Davis

Andy Zhang

V

Founder & CEO

15+ years luxury hospitality. Former MD & GM, Dream Hollywood Hotel. CEO, Hyper Nimbus (AI hospitality platform, separate venture — validates his enterprise sales track record). CEO, Hyper Talent (sports/entertainment AI, post-revenue). Board: Hollywood Chamber, Hollywood Partnership, LA Tourism Board DEI.

A

CTO

Co-Founder Fairsplit. Co-Founder Cogniscale. AI infrastructure specialist. Architected PROMETHEUS intelligence layer, SOLOMON overmind, GENESIS Protocol, UCB1 HyperRouter, and all four subsystems. Leads engineering culture and technical strategy.
