HYPERCLAW

The Infrastructure Layer for AI Agents

Open-source multi-agent orchestration with intelligent routing, causal memory, and enterprise security — built for teams that ship AI at scale.

MIT Open Source

50+ Specialist Agents

PROMETHEUS · SOLOMON · GENESIS

$2M Pre-Seed · $10M Pre-Money

THE PROBLEM

$40B+

Wasted annually on AI agent deployments that fail in production

No Intelligent Routing

Existing frameworks assign tasks round-robin or randomly. No learning, no optimization. Wrong agent = wrong answer, every time.

No Persistent Memory

Every session starts blank. Agents can't learn from past interactions, can't build context, can't improve. Groundhog Day for AI.

No Security Layer

LangChain and AutoGen have no built-in policy enforcement. Enterprise teams bolt on security as an afterthought — or skip it entirely.

Generic Agents Only

General-purpose LLM calls masquerade as "agents." No domain expertise, no specialization, no real capability — just expensive API calls.

THE SOLUTION

PROMETHEUS Intelligence Layer

HyperClaw ships a complete multi-agent orchestration stack. 50+ specialist agents managed by SOLOMON overmind, self-expanding via GENESIS Protocol, routed by UCB1 HyperRouter — backed by Civilization Knowledge Base, three-tier memory, and enterprise Three Human Gates.

🧠

PROMETHEUS + SOLOMON

Intelligence layer + Overmind agent. Always on, always watching. Manages 50+ specialists, enforces Three Human Gates, triggers GENESIS expansion.

⚡

GENESIS Protocol

Self-expanding: SOLOMON creates new specialist agents when it detects a capability gap. No other platform does this.

📚

Civilization Knowledge Base

Ingests SOPs, org charts, JDs, client profiles. OrgGraph traversal = role-aware context injection for every agent.

🔀

UCB1 HyperRouter

Self-improving model routing. Learns optimal model-to-task assignment. Gets smarter with every interaction.

🛡️

HyperShield + Human Gates

Zero-trust security. Three Human Gates: Ethical, Authorization, Uncertainty (<60%). Hot-reload YAML policies.

🔗

HyperClaw Gateway

30+ platform connectors: Telegram, Slack, Discord, WhatsApp, Teams, Gmail, Notion, Salesforce, HubSpot, Jira, GitHub, Stripe, and more.

PRODUCT

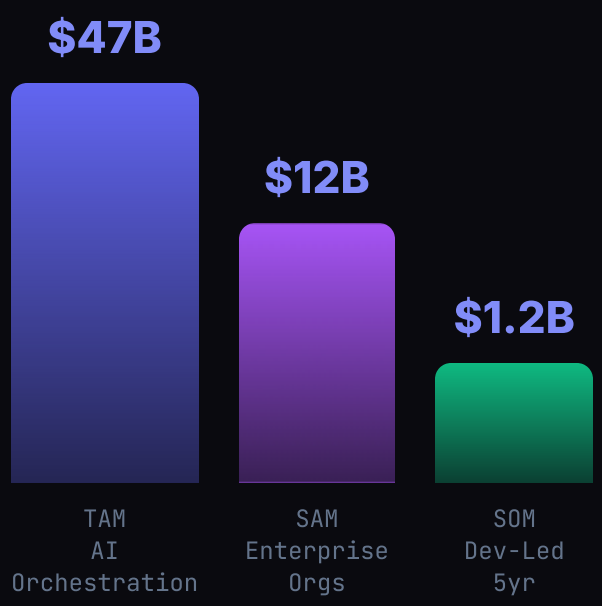
50+ Specialist Agents. 5 Domains. SOLOMON Overmind.

- **SOLOMON Overmind** — Always on, always watching. Routes, coordinates, and self-expands via GENESIS Protocol
- **GENESIS Protocol** — Self-expanding: new specialists created automatically when gaps detected
- **Civilization Knowledge Base** — SOPs, org charts, JDs, runbooks, client profiles. Role-aware context via OrgGraph
- **Three Human Gates** — Ethical, Authorization, Uncertainty (<60%). Baked in, not bolted on
- **30+ Platform Connectors** — Slack, Teams, Notion, Salesforce, HubSpot, GitHub, Stripe, and more
- **Live Supabase Backend** — Production-ready infrastructure, not a prototype
- **377 Tests Passing** — Production-grade test coverage from day one
- **MIT Licensed** — Free forever for the core, enterprise add-ons

```
# Deploy a HyperClaw swarm from
hyperclaw import Swarm swarm =
Swarm.create(
agents=["code-agent",
"review-agent",
"test-agent"],
router="ucb1",
memory="causal-graph",
shield="enterprise"
) result = swarm.run(
task="Build auth system",
context=user_context
) # UCB1 learns agent
performance # Memory persists
across sessions # Shield
enforces policy
```

MARKET OPPORTUNITY

$47B Market by 2030



DEVELOPER ADOPTION

22M+ developers globally. Open-source drives zero-CAC adoption. GitHub star growth as leading indicator.

ENTERPRISE PULL

Fortune 500 AI spend up 300% YoY. Enterprise teams need orchestration — not more LLM APIs.

TIMING

The "agent year" has arrived. 2026 is when orchestration tooling becomes the critical layer enterprises need.

OPEN-CORE MODEL

HashiCorp, Elastic, and MongoDB proved: open-source core → enterprise commercial is a billion-dollar playbook.

COMPETITIVE LANDSCAPE

We Win Where It Matters

CAPABILITY	⚡ HYPERCLAW	LANGCHAIN	AUTOGEN	CREWAI
UCB1 Intelligent Routing	✓ **UCB1 Bandit**	✗	✗	✗

BUSINESS MODEL

Open-Core → Enterprise Commercial

MIT open-source drives developer adoption at zero CAC. Enterprise commercial layer monetizes teams that need SLAs, compliance, advanced memory, and sovereign deployments.

FINANCIAL PROJECTIONS

$50M ARR by 2030

YEAR	ARR	CUSTOMERS	GROWTH
2026	**$500K**	~25	—
2027	**$3M**	~120	+500%
2028	**$12M**	~400	+300%
2029	**$28M**	~900	+133%
2030	**$50M**	~1,500	+79%

Unit Economics (Starter)

ACV: $5,988/yr · Payback: <3 months · NRR target: 120%+

CAC (Open-Core Model)

OS adoption → free trial → enterprise conversion. Target CAC <$5K, LTV:CAC >5x

Gross Margins

SaaS infrastructure margins: 75%+ target at scale. Supabase backend keeps infra lean.

USE OF FUNDS

$2M — 18 Month Runway

60% **Engineering & Infrastructure**
Scale engineering team to 6 FTEs. Build v1.0 GA release, enterprise features, SDK, and documentation.
$1,200,000

20% **GTM & Community**
Developer community, DevRel, early enterprise sales, content marketing, conference presence.
$400,000

12% **Operations & Legal**
Company formation, IP protection, compliance, finance, HR, and office setup.
$240,000

8% **Reserve**
Contingency buffer for unexpected opportunities, extended runway, or strategic hires.
$160,000

Key Milestones with this raise: v1.0 GA launch · $500K ARR · 1,000+ GitHub stars · First 25 paying enterprise customers · Seed round ready

TEAM

Built by Operators & Engineers

V

Vaughn Davis

Founder & CEO

15+ years luxury hospitality leadership. Former MD & GM, Dream Hollywood Hotel. CEO of Hyper Nimbus (separate AI hospitality venture — 210 LOIs, $7.5M+ ACV, proves enterprise sales capability) and Hyper Talent (sports/entertainment AI, post-revenue). Board: Hollywood Chamber, Hollywood Partnership, LA Tourism DEI. Visionary operator who combines commercial depth with technical vision.

A

Andy Zhang

CTO

Deep ML infrastructure and distributed systems engineer. Designed and built PROMETHEUS intelligence layer from scratch, including the UCB1 bandit routing algorithm, HyperMemory causal graph (pgvector), HyperShield policy engine, and HyperSwarm coordination layer. Author of 377-test production-grade test suite. Leads engineering culture, technical hiring, and architecture decisions.

Hiring Plan: With pre-seed funding, expanding to 6 engineers, 1 head of DevRel, and 1 enterprise sales lead in first 12 months.
