PRODUCT

CONFIDENTIAL

Product Overview

HyperClaw is a production-grade multi-agent AI orchestration platform. 50+ specialist agents. SOLOMON overmind. GENESIS self-expansion protocol. One enterprise-ready system built for real-world deployment from day one.

50+ SPECIALIST AGENTS ACROSS 5 DOMAINS

Personal
5 agents

- LifeCoach
- HealthAdvisor
- FinanceAdvisor
- TravelPlanner
- LegalAdvisor

Business
6 agents

- SalesIntelligence
- MarketingStrategist
- OperationsOptimizer
- CustomerSuccess
- HRAdvisor
- ExecutiveAssistant

Scientific
4 agents

- ResearchAnalyst
- DataScientist
- BioinformaticsAgt
- ClimateModeler

Creative
4 agents

- ContentStrategist
- NarrativeWriter
- BrandVoice
- MediaProducer

Recursive
3+ agents

- SOLOMON (Overmind)
- GENESIS Builder
- OrchestrationMgr

4 ARCHITECTURE PILLARS

STATE MANAGEMENT

01

HyperState

Typed, validated, immutable state management built on Pydantic v2. Every agent interaction is fully serializable, auditable, and reproducible. No silent failures, no mysterious state mutations.

`Pydantic v2 · Supabase · Event sourcing`

INTELLIGENT ROUTING

02

HyperRouter

UCB1 multi-armed bandit algorithm routes tasks to the highest-performing agent based on historical success rates. Gets smarter over time — no manual chain configuration required.

`UCB1 bandit · Performance tracking · Auto-optimization`

PERSISTENT MEMORY

03

HyperMemory

Causal graph memory layer powered by pgvector. Agents remember not just facts,

SAFETY & POLICY

04

HyperShield

Pre-execution policy enforcement engine. Every agent action is validated against

but causal relationships — enabling temporal reasoning across multi-session, multi-agent workflows.

`pgvector · Causal graphs · Semantic search`

configurable rules before it executes. Designed for compliance teams and enterprise security requirements.

`Policy rules · Audit trail · Compliance-ready`

PROMETHEUS + SOLOMON + GENESIS — INTELLIGENCE LAYER

PROMETHEUS is HyperClaw's intelligence layer — the recursive decision-making engine that coordinates all agents and subsystems. At the apex sits **SOLOMON**, the overmind agent: always on, always watching, always orchestrating the full agent network. The **GENESIS Protocol** makes HyperClaw self-expanding — SOLOMON automatically detects capability gaps and creates new specialist agents to fill them. No other platform does this.

Three Human Gates are baked into every workflow: Ethical, Authorization, and Uncertainty (confidence < 60%). Enterprise-grade guardrails that compliance teams can actually trust. The Civilization Knowledge Base ingests SOPs, org charts, job descriptions, and runbooks — giving every agent role-aware context via OrgGraph traversal.

ENTERPRISE PRICING TIERS

STARTER

$499/mo

For teams exploring AI automation. Full platform access, limited scale.

- ✓ All 50+ agents
- ✓ HyperShield basic
- ✓ 5 concurrent workflows
- ✓ Community support
- ✓ Supabase cloud backend

PRO

$1,999/mo

For growing enterprises deploying AI at scale across departments.

- ✓ All Starter features
- ✓ 25 concurrent workflows
- ✓ HyperShield advanced
- ✓ SOLOMON + GENESIS access
- ✓ Priority support + SLA
- ✓ Custom agent config

ENTERPRISE

$9,999/mo

For large organizations with compliance, audit, and security requirements.

- ✓ All Pro features
- ✓ Unlimited workflows
- ✓ SSO / SAML (Q2 2026)
- ✓ Custom policy engine
- ✓ Dedicated CSM
- ✓ On-prem deployment

SOVEREIGN

Custom

Air-gapped, sovereign deployments for government and defense clients.

- ✓ Air-gapped deployment
- ✓ Custom model hosting
- ✓ Full source access
- ✓ Embedded team support
- ✓ Classified workloads

PRIMARY USE CASES

Enterprise Automation

Deploy specialized agent pipelines for sales intelligence, HR workflows, operations optimization, and customer success — all with policy-enforced guardrails.

Research & Analysis

Scientific and data science agents perform literature reviews, dataset analysis, and hypothesis generation with causal memory across sessions.

Recursive Orchestration

PROMETHEUS enables self-organizing agent networks that can decompose complex goals into sub-tasks, spawn specialist agents, and synthesize results autonomously.

Compliance-Critical AI

HyperShield makes HyperClaw the first AI orchestration platform that compliance officers can actually approve — with full audit trails and configurable policy rules.

Content at Scale

Creative domain agents handle brand-consistent content strategy, narrative writing, and media production workflows at enterprise volume.

Multi-Model Workflows

HyperRouter intelligently selects the right LLM for each subtask — GPT-4o for reasoning, Claude for writing, Gemini for multimodal — optimizing cost and quality automatically.
