Leadership Team

HyperClaw is led by a founder pairing of deep enterprise operator experience and AI infrastructure engineering expertise — the combination required to build and sell production AI systems at scale.

CO-FOUNDERS

VD

FOUNDER & CEO

Vaughn Davis

Founder & Chief Executive Officer

Vaughn Davis brings **15+ years of luxury lifestyle hospitality and Industry 4.0 leadership** to HyperClaw. As former Managing Director of Dream Hollywood and CEO of both Hyper Nimbus and Hyper Talent (separate ventures), Vaughn has spent his career at the intersection of high-touch human service and cutting-edge technology adoption.

He pioneered AI-driven guest experience systems and robotic concierge deployments at scale. His track record at Hyper Nimbus — 210 LOIs, $7.5M+ ACV in a separate hospitality AI venture — proves he can open doors and close enterprise deals. That commercial execution capability is what HyperClaw's go-to-market is built on.

- 🏨 **Former Managing Director** — Dream Hollywood Hotel, Dream Hotel Group
- 🚀 **CEO, Hyper Nimbus** — AI-powered hospitality management platform (separate venture, launched Feb 2024). As Founder & CEO, Vaughn has signed 210 LOIs representing $7.5M+ ACV in the hospitality AI market — demonstrating his ability to execute enterprise sales at scale.
- ⚡ **CEO, Hyper Talent** — Sports & entertainment AI platform (separate venture, post-revenue)
- 🏛️ **Board Member** — Hollywood Chamber of Commerce, The Hollywood Partnership
- 🎓 **Hofstra University** — Political Science; career spanning Gansevoort, Hyatt, Dream Hotel Group, Two Roads Hospitality

AZ

CO-FOUNDER & CTO

Andy Zhang

Co-Founder & Chief Technology Officer

Andy Zhang is a seasoned AI infrastructure engineer and serial technical co-founder. He previously co-founded **Fairsplit**, a fintech product built around equitable financial splitting algorithms, and **Cogniscale**, an AI infrastructure company

focused on scalable model deployment. His background spans the full stack from ML systems to product architecture.

At HyperClaw, Andy designed and built the four-pillar architecture — HyperState, HyperRouter, HyperMemory, HyperShield — and the PROMETHEUS recursive intelligence layer. The 377-test codebase under MIT license reflects his engineering rigor. He is the reason HyperClaw ships production-ready systems, not research prototypes.

- 🏗️ **Co-Founder, Cogniscale** — AI infrastructure for scalable model deployment
- 💸 **Co-Founder, Fairsplit** — Fintech platform, equitable financial splitting
- ⚙️ **AI Infrastructure Specialist** — multi-model orchestration, vector databases, agentic systems
- 🔬 **HyperClaw Architect** — designed HyperState, HyperRouter (UCB1), HyperMemory, HyperShield, PROMETHEUS

WHY THIS TEAM WINS

🤝

Operator + Engineer

The rarest pairing in enterprise AI: a CEO who has deployed AI in production at scale, and a CTO who builds the systems from scratch. No gap between vision and execution.

🏢

Enterprise Access

Vaughn's network spans luxury hospitality, LA commerce, and Industry 4.0 — opening doors to early enterprise adopters that most AI startups cannot reach in their first year.

🔬

Technical Credibility

Andy's track record at Cogniscale and Fairsplit, combined with 377 passing tests and a production-grade architecture, signals to enterprise buyers that HyperClaw ships real software.

🌐

Cross-Industry Vision

HyperClaw's agent domains span Personal, Business, Scientific, Creative, and Recursive — a breadth of vision that reflects a founding team that understands AI's horizontal potential.

⚡

Execution Velocity

v0.1.0-alpha shipped with Supabase backend live, 377 tests, and MIT license — in a short window. This team ships.

📐

Complementary DNA

Vaughn handles go-to-market, enterprise relationships, and vision. Andy owns architecture, engineering quality, and technical roadmap. Clean ownership, no overlap, no gaps.

HyperClaw is raising its pre-seed round with this two-person founding team. The raise will fund the first three engineering hires, enterprise sales infrastructure, and the GTM push into the Vaughn's existing enterprise network.
