Traction Summary

HyperClaw has shipped a production alpha, established its cloud infrastructure, and validated the core architecture through 377 passing tests. We are raising $2M to accelerate from alpha to first enterprise customers.

KEY METRICS — Q1 2026

377	v0.1	50+	$2M
TESTS PASSING	ALPHA LIVE	AGENTS SHIPPED	PRE-SEED RAISE

DEVELOPMENT MILESTONES

Q4 2025 — **Architecture Design & Core Build**

HyperState, HyperRouter (UCB1), HyperMemory (pgvector causal graph), and HyperShield policy engine designed and implemented. PROMETHEUS recursive intelligence layer architected.

Q4 2025 — **377 Tests Written & Passing** LIVE

Comprehensive test suite covering all four architecture pillars, agent routing, state management, memory operations, and policy enforcement. Zero known failures.

Q1 2026 — **v0.1.0-alpha Released** LIVE

First public alpha release on GitHub under MIT license. 50+ specialist agents across 5 domains. SOLOMON overmind + GENESIS self-expansion protocol. Supabase backend live. Open for community adoption and feedback.

Q1 2026 — **Supabase Backend Live** LIVE

Production cloud infrastructure deployed on Supabase. Postgres with pgvector, Row Level Security, real-time subscriptions, and Auth layer all live. Ready for enterprise customer onboarding.

Q1 2026 — **Pre-Seed Round Opened** IN PROGRESS

$2M raise at $10M pre-money valuation. Targeting lead investor close Q2 2026. Capital earmarked for engineering hires, enterprise GTM, and product roadmap acceleration.

Q2 2026

First Enterprise Customers (Target)

Close first 3–5 enterprise contracts via Vaughn's network. Target ARR contribution: $50K–$200K from initial cohort. Validate GTM motion and pricing architecture.

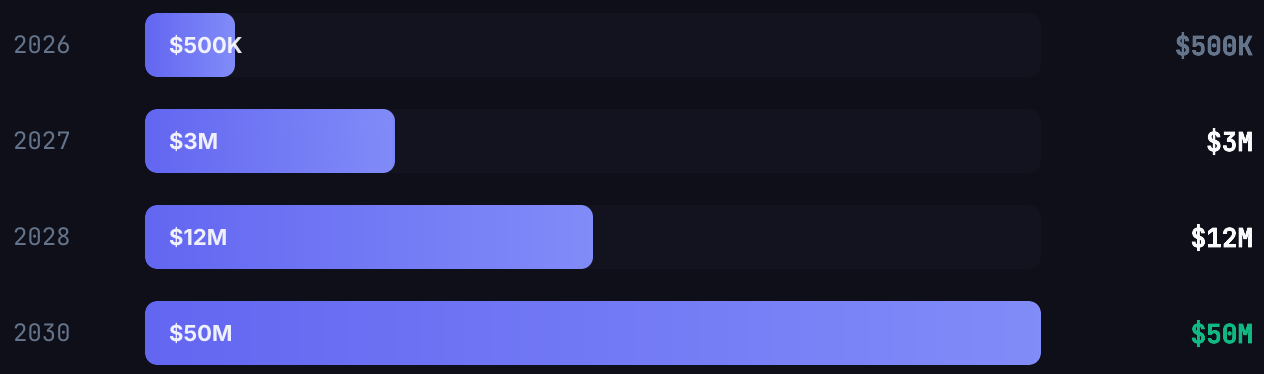
Q3 2026

v0.2 — SSO, Custom Policies, Enhanced PROMETHEUS

Enterprise feature pack: SSO/SAML integration, custom policy templates, PROMETHEUS scheduling, enhanced HyperMemory cross-session continuity. Required for $9,999/mo Enterprise tier sales.

ARR GROWTH TRAJECTORY

Annual Recurring Revenue Targets



PRE-SEED RAISE TERMS & USE OF FUNDS

Raise Terms

Raise Amount	$2,000,000
Pre-Money Valuation	$10,000,000
Post-Money Valuation	$12,000,000
Instrument	SAFE / Priced Round
Target Close	Q2 2026
Projected Runway	~18 months

Use of Funds

40%	Engineering Hires
25%	GTM & Sales
20%	Infrastructure
10%	Operations
5%	Legal & Admin

DISTRIBUTION MOAT

⚡ OpenClaw Migration Pipeline

Distribution moat: zero onboarding friction

Distribution moat: OpenClaw user base provides a direct migration pipeline into HyperClaw enterprise. Users arrive with existing context — zero onboarding friction. OpenClaw users have already validated the AI-agent relationship model in their personal lives. When they migrate to HyperClaw via `hyperclaw migrate --from openclaw`, their memory, tasks, agent configs, and conversation history transfer automatically into the Civilization Knowledge Base. SOLOMON knows who they are on day one. No ramp. No re-education. No churn risk from onboarding friction. This pipeline extends to all OpenClaw forks and clones — any user running an OpenClaw-compatible workspace can migrate seamlessly.

OPEN SOURCE PRESENCE

HyperClaw on GitHub

github.com/mentatalbans/hyperclaw

MIT licensed open-source core. Public repository. Community adoption is the primary top-of-funnel for enterprise leads — developers discover HyperClaw, bring it to their organizations.
